

A microscopic view of neurons, showing a central cell body with multiple branching processes. Some of the processes are highlighted with a bright orange glow, suggesting electrical activity or signal transmission. The background is a dense network of similar structures, creating a complex, interconnected pattern.

Explore the Brain

Come learn about the nervous system.

We will have sheep and human brain specimens.

We will also have a live demonstration that shows nerve cell activity.

A hands on experience about how your brain works!
